

District (n)

Düsseldorf
Completion 2006

Client: Aengevelt Projekt-
entwicklung
Cost: appr. 250.000 Euro
Area: 6.000 sqm
Service Phases: Lph 1 - 8
Duration: 2005 - 2006

Soundscape:

Noises transcend the boundaries between the airport, service and office locations, motorway and railway line. Jet engines - sounds of planes, multi-cylinders - sounds of cars, fans - sounds of computers, steel on steel - sounds of railways. An infinite number of superimpositions from machinery, inherently rhythmic noises to indifferent noise situations are constantly heard. Audio deserts, audio spheres.

Synchronomatic:

The disturbing soundscape is detached and framed through the skeletal mapping of tonal structures. Movement and optical rhythm transform the sound, which appears endlessly rustling and monotonous, into a scene with lively music. Buildings are made of construction material, landscaping of traffic areas transform into gardens.
