Science and Technology Innovation Cooperation Zone
Development Co., Ltd.
Area: 27.500 sqm
Service Phases: Lph 2, 3, 5
Competition: 1. Preis 11/2019
Duration: 2019 - in planning
In collaboration with: schneider + schumacher

A cooperation zone for innovation in science and technology is currently being established in China between the cities of Shenzhen and Hong Kong.

The National Centre for Research and Development will be one of the first buildings constructed in this zone. The phased building complex will culminate in a 120-metre-tall office tower.

In conjunction with the architectural design, there are 11 roof gardens at different heights, which offer several functions: outdoor public spaces for exhibitions, business receptions, rest for employees, sports, office work. Each garden is unique and has its own identity and recognisability.

It is an experiment to break up the hardened urban landscape, increase the greening of the city and to improve the ecology.
