

Cycle highway Frankfurt - Darmstadt, Section Langen

Langen
Completion 2023

Client: Regionalpark RheinMain
Südwest GmbH, c/o Kelsterbach
Cost: ca. 1 Mio. Euro,
total ca. 5 Mio. Euro
Area: total 6 km
(Darmstadt Wixhausen, Dreieich, Langen, Neu-Isenburg)
Service phases: Lph 1 - 9
Construction phase
Duration: 2019 - 2023
In collaboration with:
EGL, KH Planwerk

The planning and implementation of fast cycle connections is about change in the transport sector. The RSV Frankfurt-Darmstadt is a pilot project and the first high-speed cycle link in Hesse. The planned cycle link connects Frankfurt via Neu-Isenburg, Dreieich and Langen to Darmstadt. A section in Egelsbach and Erzhausen has already been completed in recent years. The next building block to be planned and implemented is the Langen, Südgemarkung section. This section is an overland route that runs through landscape and nature conservation areas. The area has a varied landscape and a high recreational value. Accordingly, the area is frequented by pedestrians, dog owners and recreational athletes. The existing service roads are necessary to access the private gardens and agricultural land. These paths are already an important cycle route that is used by schoolchildren in particular. Accordingly, the planning and redesign of the direct cycle path follows the existing route. The paths will be integrated into the concept and widened. The cycle path will be widened to a width of 7.50 m for the most part. This width results from 4 m of cycle path, 2.50 m of footpath and 0.50 m of verge on each side.
