

## Monastery environment Frankenberg

Frankenberg (Eder)  
Fertigstellung 2024

Client: Magistrat der Stadt Frankenberg  
 Cost: 1,26 Mio. Euro  
 Area: 7400 qm  
 Service phases: 1 - 8  
 Duration: 2021 - 2024  
 In Collaboratio with: Ingenieurbüro Wolfgang Schrötter, WAGU GmbH, Oppermann GmbH

The historic St. Georgenberg monastery is being reactivated in the urban fabric and made more attractive by redesigning and planting the monastery garden. The newly designed inner courtyard of the monastery refers to the historically documented division of the 18th century into a courtyard area and a garden area with a lush flowering perennial planting and a display and teaching bed with over 50 historical medicinal plants based on historical models. The monastery garden is divided into flowerbed structures with main and side paths that invite visitors to stroll and benches that invite them to linger in peace. In addition, the adjacent large parking lot will be dismantled, which will enable further renaturation of the Nemphe. This will restore the historic, unique location of the monastery in the Nemphe floodplain. In addition, the demolition and unsealing of the parking lot will free up space to reactivate the valuable floodplain. At the same time, the lost parking space must be relocated. Wherever possible, this should be done using materials that allow seepage and targeted planting of trees in order to create a climate-adapted, green and needs-based parking area. Looking at the entire construction project, there was and is no additional land sealing. Instead, the urban space was reorganized and expanded to include a valuable open space for fauna, flora and people.
